Pool Covers

DEL POOL COVERS

DEL Pool Covers

The right pool cover can make a big difference to your enjoyment of owning your own pool. A pool cover can save you time and money in maintenance, it can make your pool a safer place and it can make it look even more attractive all the year around.

A pool cover will help retain heat in your pool by reducing radiation, at the same time, it will cut down evaporation, which effectively means that you need to use less chemicals to keep the water in balance.

A pool cover can improve safety for your children or your pets when you aren't there to supervise and, by using one of the DEL lock options the cover is held in place preventing any total immersion into the pool water.

A pool cover with solar slats will even help warm your outdoor pool at absolutely no cost.

DEL is a French company who have been making pool covers for 40 years. Suitable for either new or existing pools, every one of their range of covers is manufactured to the highest standard and is the result of their long commitment to design, research and development. Perhaps the fact that they all look so stylish is just the natural result of their being French.

In the range of DEL covers in this brochure, you will certainly find something that is perfect for your own pool and will provide one or more of these benefits.

ROLLENERGY

RollEnergy

RollEnergy is a powered, slatted cover that offers easy and quick installation into an existing pool or can be specified for a new build.

The cover is powered by a motor housed in the roller tube, which is sited behind the end wall in a specifically designed and built 'pit'.

For new builds this is usually created as part of the construction of the pool. For existing pools the wall can be created with Securiwall made using 40mm PVC panels. The area over the roller pit can be covered using wood decking or with a finish that matches your existing pool surround.

Fixing brackets are installed above the water line so RollEnergy is easy to install in an existing pool without any need to drain and refill.

RollEnergy is mains powered and can be installed on a pool up to 8 x 15 metres.

Slats are available in white, beige, blue or grey. It is also possible to specify a RollEnergy cover with solar slats that will help warm the water.

RollEnergy will cut down on maintenance by keeping dirt and debris out of the pool, it will act as a safety cover – and can be locked in place – it will reduce chemical use by cutting down evaporation and, with the solar option, will reduce energy costs.

ROLLFIT

RollFit

RollFit is an automatic cover that preserves the elegance of a pool's lines.

The rolled up cover and tubular driver are discretely hidden behind immersed decking that is customisable to perfectly match the pool's style.

RollFit is suitable for either new builds or as a retrofit installation to an existing pool. It can be installed in pools that are tiled or those with a reinforced membrane or liner.

RollFit is ideal for pools from 2.5 x 3 metres up to 6 metres wide and there is a range of motors that vary in power dependant on pool size and depth. The motor actuation is remotely controlled by Wi-Key.

Slats are opaque PVC or polycarbonate solar slats and are fitted with a safety locking kit. PVC slats are available in grey, white, beige and blue. Solar slats may be specified in crystal brown, green, blue, clear or black.

RollFit provides all the advantages of an automatic pool cover without disturbing a pool's aesthetic appeal.

ROLLINSIDE

Rollinside

Rollinside is an in-pool, automatic safety cover designed for concrete pools and needs to be installed during either original construction or a major refurbishment.

The rolled-up cover and its tubular driver can be recessed into the bottom of the pool floor, integrated into the pool steps or sit on the pool floor inside a PVC decking bench. A separate motor installed in a dry pit provides the power.

Rollinside provides a practical and elegantly discreet pool cover solution and is ideal for pools up to 6 x 20 metres.

Slats can be specified in white, beige, grey or blue PVC or one of five crystal polycarbonate colours for improved solar gain including blue, green, brown, clear or black. Step cut-outs, including Roman ends, are custom made to your specification.

The cover can be locked in place by a choice of DEL locking kits.

Rollinside provides an extremely sophisticated pool cover installation that increases pool safety and reduces maintenance and running costs.

ROLLOVER

RollOver

RollOver is a luxury, above-ground, slatted pool cover system that can be mains or solar powered.

Suitable for either new or existing pools, RollOver features a sturdy 'bench' that contains both the cover and motor that sits across the pool and can be finished in either white PVC or an IPE wood casing.

On solar powered installations, the photovoltaic cells are also mounted onto the bench casing.

RollOver can be retrofitted or specified for a pool up to 7 x 14 metres.

The slatted cover can be supplied with step ends custom-cut to the specification of your own pool.

The PVC slats themselves may be white, blue, beige or grey or a translucent polycarbonate option is available for improved solar gain. Colours include crystal brown, green, blue, black or clear.

MOON

Moon

Moon pool cover systems come straight from DEL's commitment to innovation and design.

With a stunningly modern and stylish look, Moon is an above-ground system that is easy to install on pools up to 5 x 10 metres.

The slats and tubular motor are supported between a pair of end stands that contain the control system and also, in the case of the solar powered option, the photovoltaic panel.

These impact and scratch resistant end stands can be customised with a choice of 5 inserts in modern, vibrant colours.

The slatted cover can be supplied in PVC or Polycarbonate.

The PVC slats are available in white, blue, grey or beige or a polycarbonate 'solar' option is available in crystal blue, green brown, clear or black to help maximise the benefits of heat gained from the sun.

DUNE

Dune

The Dune automatic, above-ground pool cover system combines leading edge technology with DEL's forward looking design philosophy.

The slatted cover and tubular motor are supported by two powder-coated, aluminium modules that are as much inspired by modern art as they are by functional design.

Dune can be either mains powered or, with 1, 2 or 3 photovoltaic panels, solar powered.

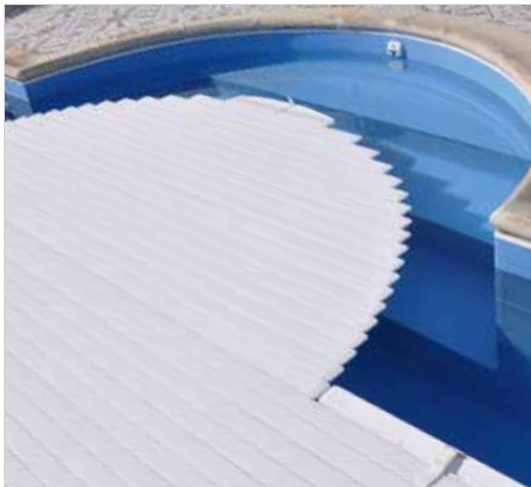

The solar panel along with the parts that control the opening or closing of the cover are built into the supporting modules.

PVC slats can be supplied with Dune in the usual colourways of white, beige, blue or grey or a polycarbonate 'solar' option is available to help maximise the benefits of heat gained from the sun. Polycarbonate slats are available in crystal green, brown, blue, clear or black to help maximise the benefits of heat gained from the sun.

Dune can be easily installed on pools up to 9 x 18 metres.

ROLLEASY 2

RollEasy 2

RollEasy is a perfect cover solution for smaller pools up to 5 x 11 metres in size.

The end stands on RollEasy are slim and unobtrusive. They are available in a range of 8 colours to fit in with any pool design or theme.

RollEasy is not only versatile in its colour finish, it can also be specified as electrically powered, solar powered or manual.

The slatted cover can be supplied in PVC or polycarbonate. The PVC slats may be white, blue, grey or beige or a polycarbonate 'solar' option helps maximise the benefits of heat gained from the sun. These can be supplied in five crystal colours: blue, green, brown, clear or black.

RollEasy will not only help keep dirt and debris out of your pool, it will reduce evaporation and therefore you will need to use less chemicals and, it can be locked in place as a safety cover when the pool is not in use.

MOOVE'O

Moove'O

Moove'O is a moveable, automatic pool cover that allows you to free the surroundings of your pool from obstruction when the pool is being used.

Because it is mobile, it really couldn't be any easier to install on an existing pool.

Moove'O is self contained and solar powered with high-performance photovoltaic cells charging a pair of batteries. Running on coupled wheels, Moove'O can be rolled up to or away from your pool by a single person.

The wheeled support units are available in white, beige or grey and the tubular motor is key controlled.

When in place, the PVC slatted cover, which is available in a range of colours or a polycarbonate 'solar' option, will reduce the amount of dirt and debris getting into your pool, cut down evaporation and therefore chemical use and can also be locked in place as a safety cover.

Moove'O is stylish, practical and perfect for any pool up to 5 x 11 metres.

VERNEA

Colour Options

Green

Blue

IVERNEA

IVERNEA is an easy to fit winter shield that protects any of the slatted covers in the DEL range.

As each cover is custom made it will fit precisely the shape and size of your pool.

The opaque polyethylene cover is attached by clips and elasticated cords directly onto the cover slats and protects them from damage or discolouration from UV or dirt.

IVERNEA also features a peripheral screen that filters rainwater and helps trap leaves and debris throughout the winter.

IVERNEA offers unique protection for your slatted cover and is available in green or blue.

SLATS

Slats

On all slatted covers, the slats themselves are obviously a key part of your pool cover installation.

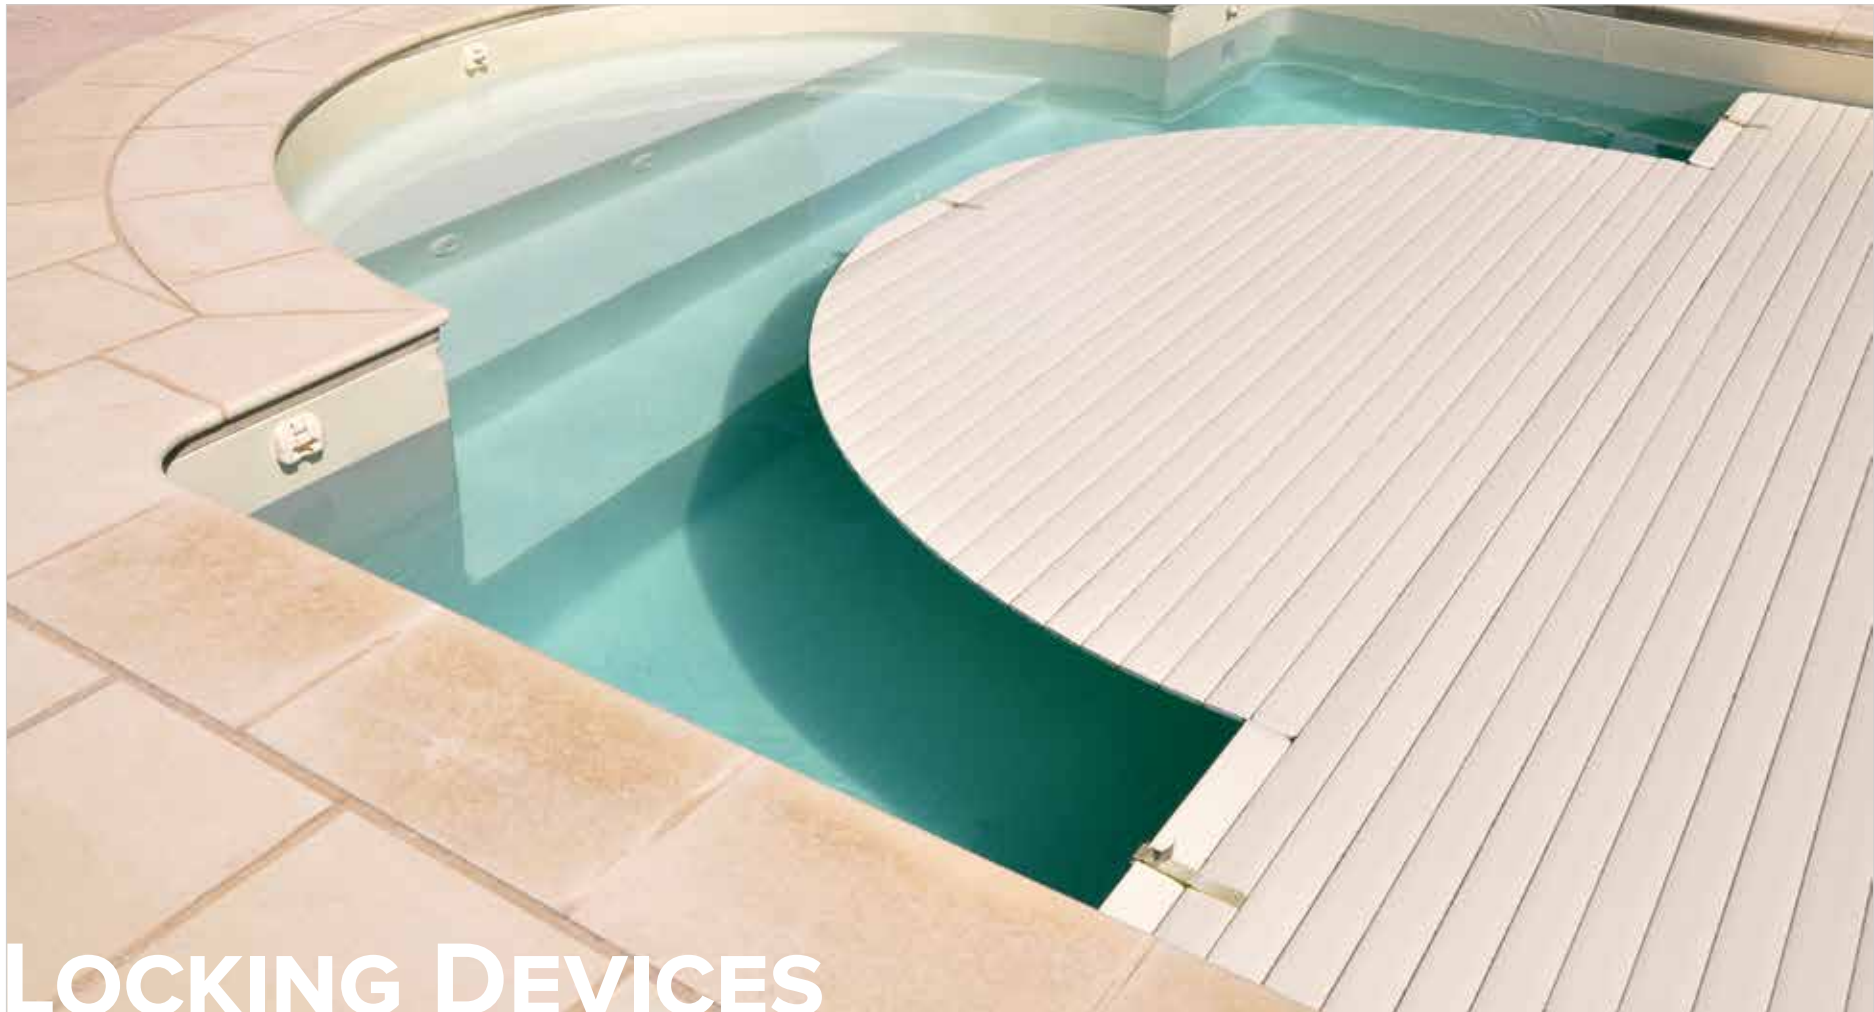

DEL PVC slats all carry a 3 year guarantee. They have excellent buoyancy and are resistant to fading and staining. The 69mm slats come in a range of colours: white, beige, blue and grey and matched end caps are, of course, available in each colour. There is also a polycarbonate 'solar' option in five crystal colours including clear, green, blue, brown and black.

The PVC end caps now also come in a range of radius curves that allow the cover to follow the lines of your pool more closely for a better aesthetic and increased safety.

DEL polycarbonate slats have a 5 year guarantee and are a 'solar' slat in that they help absorb the sun's warmth and transmit that heat to the water of your pool.

All DEL slatted covers can be shaped to the precise dimensions of your pool to accommodate Roman ends or steps. This shaping is done at the factory and the cover is delivered ready cut.

A DEL slatted cover will help keep your pool free of dirt and debris, cut down evaporation and therefore chemical use and can also be locked in place as a safety cover.

LOCKING DEVICES

Locking Devices

All DEL slatted covers can incorporate locking devices to significantly improve the safety of your pool when not in use and unattended.

Available in two types - QuickLock and PushLock - both are easy to operate by a responsible adult and, with the cover locked into place, you can feel peace of mind in regard to the safety of your children or pets.

Please note if either lock is fitted, the pool will need to have an automatic water top up device to maintain the covers level with the locks, which are fixed to the pool walls.

SLATTED COVER CONTROLS

Remote Control

The entire DEL slatted cover range is operated via either a key switch or Wi-Key remote control.

When operated, the cover opens or closes, automatically stopping at a pre-determined point making operation simple and straightforward.

For your further convenience, all electrically powered covers (not solar) can be supplied with an optional pocket remote control, adding to the enjoyment of your automatic pool cover system.

Wi-Key (Standard)

Suitable for indoor or outdoor use, the password protected Wi-Key can be installed away from the pool allowing the cover to be remotely opened or closed from a more convenient location.

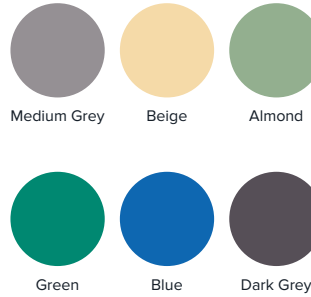

This is available on all cover systems apart from the Moove'O, RollEasy 2 and MiKado.

ULTIMA

Colour Options

Ultima

Ultima is an automatic, four seasons cover that completely covers and secures your pool. Working as both a safety cover and a protection from debris, Ultima can be specified for a new build or retrofitted to an existing pool.

Ultima is suitable for pools up to 7 x 14 metres. Its twin hydraulic motors allow it to close over a 9 metre pool in less than a minute. The cover is operated by the Wi-Key digital remote control box.

When installed in a new build, the Ultima cover is concealed in a 'dry' pit and retracts clear of the pool.

The above-ground version of Ultima is suitable for refurbishment projects or free-form pools. In this version, the retracted cover is stored within a sturdy, poolside 'bench'.

The PVC fabric cover is available in a wide range of colours and runs on an aluminium rail system that is mounted under the coping or on the pool surround, dependant on configuration.

MIKADO

MiKado

MiKado is a four-season, safety cover for your pool, which as it completely seals the pool, makes an excellent winter cover keeping out dirt and debris.

The reinforced cover can be rolled or unrolled in less than 3 minutes and comes in a range of 5 colour options: grey, beige, almond, green or blue.

Although the reinforced cover won't provide the same level of insulation as a DEL slatted cover, MiKado will reduce evaporation and help your pool to stay warmer.

MiKado can be fitted to pools up to 5 x 10 metres in size and can be operated by a manual cranking mechanism or the MiKamatic motorised system.

Although the MiKado pool cover is always rectangular in shape, it can accommodate Roman ends or side steps up to 3 metres in size.
